

# HFT Systems Developer

## Responsibilities

Design, implementation, and maintenance of latency sensitive high frequency trading systems.

## Required Skills and Experience

- C++(03/11/14).
- STL and template programming.
- Low latency design.
- Performance tuning and analysis.
- Understanding of and optimization for modern Intel / AMD architectures.
- Network acceleration (Solarflare Openonload, Chelsio WireDirect, Mellanox VMA).
- Unit testing.

## Desired Skills and Experience

- Boost libraries.
- Linux systems tuning.
- Automated systems testing.
- Other programming languages.
